Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Manens, et al. (US 6,848,970B2).

Manens, et al discloses an electrical source (feature 190 in Fig. 1A) with an electrode formed by the pad carrier and a counter-electrode formed by the substrate(col. 7, lines 1-15). There is also a conditioning pad which is insulated from the electrodes because it is disclosed to be formed of diamond or silicon carbide which is patterned to be abrasive(col. 12, lines 17-28), which are dielectric materials which are therefore insulative. This would result in the abrasive surface being electrically isolated from the pad when the conditioning pad is contacting the pad. The system is for electrochemical polishing, as it is disclosed that the system can be for electrochemical dissolution(col. 7, lines 10-12), and as the system has a polishing pad and support which are connected to

an electrical source, this electrochemical dissolution is electropolishing. The first and second electrodes may be the cathode and the anode(col. 7,lines 10-15). It is shown in Fig. 1B that the conditioning tool has a surface and a substrate 258. In Fig. 1B it is indicated that the conditioning disc rotates to condition the surface of the pad when in contact with the pad.

Allowable Subject Matter

Claims 5-12, 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
